Preface

A "LETTER OF AGREEMENT- LoA" signed at 11th of March, 2019, between the Food and Agriculture Organization of the United Nations ("FAO") and Chamber of Forest Engineers of Turkey for provision of trainings on various subjects for the employees of forest enterprises of the State Agency for Environmental Protection and Forestry (SAEPF) in the Kyrgyz Republic, within the project GCP/KYR/010/GFF- "Sustainable Management of Mountainous Forest and Land Resources under Climate Change Conditions".

According to this LoA *the following* 3 (three) trainings activities are going to be organized by the Chamber of Forest Engineers with close cooperation of General Directorate of Forests.

1. Training Program of "Nursery Plant and Management, Sapling Production with Closed Root System and Afforestation Techniques.
2. Training Program of Forest Pests and Diseases.
3. Training Program of "Forest Fire preparation, early warning, fire fighting, post-fire rehabilitation, computer-based fire management system" with visit to "SIMULATION CENTER" by training participants. "

The first training program was organised from 20th of March to 29th of March 2019. A "Narrative Technical Report" has been prepared and submitted to FAO on time. **The Second Training** program on "Forest Pests and Diseases" has been implemented by OMO with close cooperation of the General Directorate of Forest from 13 to 22nd of April, 2019.

For the third one on *"Training Programme of "Forest Fire preparation, early warning, fire fighting, post-fire rehabilitation, computer-based fire management system" with visit to "SIMULATION CENTER" by training participants*" , as the Service Provider, the Chamber of Forest Engineers proposed to reschedule the time from 20-29 April to 17-26 June 2019. Upon the approval of the proposal submitted by OMO, a new agreement was signed in addition to the agreement dated 11 March 2019.

According to the LoA and the Amendment to the LoA, the Service Provider should prepare and submit the **Interim Narrative Report for** *"Training Programme of "Forest Fire preparation, early warning, firefighting, post-fire rehabilitation, computer-based fire management system" with visit to "SIMULATION CENTER" by training participants"*

With this above mentioned training activity, The *Service Provider produced the following output:* **Output 3**. The trainings for sharing with experiences and best practices and technologies in several fields of forestry issues, such as prevention of forest fires and computer-based fire management system, identifying opportunities and challenges is conducted for participants.

Day 6-June 22, Saturday

The sixth day of the training continued at the simulation center. Today, a big forest fire was launched on the simulation. Kyrgyz participants were divided into a small number of teams as applied in real forest fires.

Figure 10 Simulation Center

Also, a fire supervisor was identified in accordance with the system applied in real fires. Before the simulation started, the fire supervisor and the teams discussed in detail how to respond to the fire.

Then, with the commands of the fire supervisor, teams deployed in different parts of the forest were transferred to the fire. The fire lasted about 2 hours and was successfully put out. Then all the teams gathered, how to intervene in the fire, what they should do, what should not do by the trainers were explained one by one.

Figure 11 Simulation Center

Finally, the actual photographs related to forest fires in Turkey and videos were shown. How to intervene in fire was explained one by one. The training was completed by discussing the lessons learned from the interventions.

In 2016, a total of 1350 ha area was damaged in this fire in Kumluca. The fire resulted from the electrical lines lasted about a week. This fire was intervened with 4 amphibious aircraft, 9 helicopters, 60 fire tracks and 500 workers.

During this training, the participants were explained in detail how this intervention was done and how coordination was provided. Lessons learned are explained. In this way, the participants had the opportunity to compare what they saw in the simulation center and those applied in the field.

Then, the burning forest area in Adrasan, in 2014, was visited.

Adrasan Region has been evaluated as a very dangerous fire because of its tourism potential and being close to settlements, especially hotels.

The fire was intervened within 12 minutes of receiving the notification. However, due to weather and terrain conditions, the struggle took a long time.

Here, silviculture (forest maintenance) studies after fire were explained to the participants one by one. The questions were answered. Then the fire area of Olympus was examined. Here, "Fire Memory Point" created after the fire was visited.

Theoretical and practical trainings continued on Tuesday, June 25, 2019, which is the ninth day of the training.

In this context, a field exercise was organized. In this exercise, clothing and equipment used by workers in forest fires are shown. In Turkey a great attention is given to safety in fire. In this context, personal protective equipment is provided to the officials. During field exercise, personal protective equipment is shown and explained one by one.

Figure 13 Forest Fire Tracks

When an alert received about any forest fire, reaching to area as soon as possible is very important. For that reason Turkey uses small vehicles called first responders equipped for that aim. Than fire tracks come. Exercises were also held to introduce this vehicles.

After that field exercise, Ilhami Aydın, Deputy Head of Forest Fires Department, General Directorate of Forestry, made a presentation. In this presentation, electronic systems, unmanned aerial vehicles and software used by Turkey in combating forest fires are introduced.

Following the completion of the training, the Kyrgyz participants were taken to the Antalya airport. They were boarded without any problem. In Istanbul, measures were taken in the same way and the transition from domestic lines to international lines was ensured. The interpreter assigned by the Forest Engineers assisted the passport process of the participants and the delegation was boarded safely.

Conclusion

This training, which was planned in cooperation with the United Nations Food and Agriculture Organization and the Chamber of Forest Engineers, was implemented in accordance with its schedule and budget.

Participants has seen the theoretical and practical applications of Turkey. The participants personally monitored and implemented how a real fire could be managed in the simulation center. They also examined all the details in the field.

Pre-fireworks, fire extinguishing works and post-fireworks are shown in all aspects.

As a result, a highly successful training program was realized.

The interest of participants, to follow the program was welcomed by Turkey. It is considered that highly accurate and interested people have participated in the program.

We would like to take this opportunity to thank the FAO Kyrgyzstan team and the Kyrgyzstan Forest Organization. Also, as the Chamber of Forest Engineers we would like to thank to the General Directorate of Forests of Turkey.
